

The best trigger adapts to the process.

Motion Trigger & Motion Loop

Scan triggering through the natural hand movement. No mechanical button, no additional point of wear.

Motion Trigger and Motion Loop replace the Trigger Pad and the cuff. Operation in picking, sorting and other intralogistics processes becomes more intuitive and more comfortable. At the same time, wear and operational effort drop considerably.

65 %

higher productivity in the process

→ more throughput per shift

≈ 0

error rate close to zero

→ less rework and fewer complaints

0

mechanical buttons on the system

→ one less reason for downtime

Effort ↓

less maintenance and replacement

→ predictable process costs, no wear risk

MOTION TRIGGER

One movement. Two speeds. The process decides.

In picking, the worker triggers deliberately and under control. At the sorting station, triggering is configured for fast, repeated scanning. NIMMSTA Service takes care of the setup.

- Intuitive triggering through the natural movement
- Fewer components, fewer potential sources of error
- Less maintenance and service effort
- One system for picking and sorting: the process defines the trigger, with no changes at the workstation

Scanning with a tap of the finger: the Smart Watch confirms the trigger via LED, display and sound.

MOTION LOOP

One band for every hand. Secure, ergonomic, durable.

The ergonomic band with a thumb opening positions the Smart Watch securely on the hand and holds reliably even during movement-intensive work.

- Seamlessly knitted, no pressure points
- Ergonomically shaped, holds firmly without constricting
- Breathable, less sweating on long shifts
- Size-adjustable, one part for right and left
- Skin-friendly in continuous operation
- Replaceable in seconds and washable
- Made in Europe

WHAT YOU GET

Reliability

No mechanical button that can fail. The process keeps running.

Less effort

Fewer components, less maintenance. Service handles the setup.

Predictable costs

No cost risk from wear. Replacement is covered by the contract.

Higher acceptance

Seamless and breathable. Everyone starts with a fresh loop.

“We did not want to simply develop another button. Our goal was to make the entire process more intuitive and more reliable.”

Andreas Funkenhauser, CEO and Co-Founder, NIMMSTA
